

ESET Protect (EP) - Uvoz i korištenje više licenci

Zadatak

Imate više licenci. Želite ih rasporediti po jedinicama svoga poduzeća. Licence su:

- za ESET Endpoint Antivirus (EEA) – 200 računala u lokalnoj mreži
(licenčni ključ: AAAA-1111-BBBB-2222-CCCC; dalje u tekstu: “AAAA”)
- za ESET Endpoint Security (EES) na prijenosnim uređajima – 25 računala
(licenčni ključ: DDDD-3333-EEEE-4444-FFFF; dalje u tekstu: “DDDD”)
- za ESET Endpoint Security (EES) na računalima vanjskih suradnika – 10 računala
(licenčni ključ: GGGG-5555-HHHH-6666-IIII; dalje u tekstu: “GGGG”)

Napomena: naravno, mogli ste nabaviti samo jednu licencu za svih 35 EES, ali za potrebe ovog primjera su kupljene odvojene licence.

Postupak

Odlučite li prihvatiti zadatak, trebate učiniti sljedeće:

- Instalirajte EP server (EPS) ^(*)^(*)
- Uvezite sve tri licence (“License Manager” -> Actions -> “Add licenses”) (Sl.1)
(https://help.eset.com/protect_admin/80/en-US/admin_license_management.html)
- U EP konzoli (EPC) kreirajte tri statičke grupe (Sl.2)
(https://help.eset.com/protect_admin/80/en-US/admin_create_new_static_subgroup.html); npr.:
 - grpLAN1
 - grpLaptop3
 - grpVanjski5
- Svim računalima u svim grupama prvo instalirajte Agentu na jedan od nekoliko dostupnih načina (Sl.3)
(https://help.eset.com/protect_admin/80/en-US/fs_deployment.html)
- Kad se računala jave konzoli pojaviti će se u grupi “All” ili u grupi “Lost & found” ^(*)
- Premjestite (“drag & drop”) ih u pripadnu grupu
(https://help.eset.com/protect_admin/80/en-US/computers.html)
- Zadatkom “Software install” instalirajte odgovarajući sigurnosni program na računala u grupi “grpLAN1” (Sl.4)
(https://help.eset.com/protect_admin/80/en-US/client_tasks_software_install.html):
 - u koraku “<Choose package>” odaberite najnoviju verziju programa “ESET Endpoint Antivirus” (EEA)
 - za aktiviranje, u koraku “<Choose ESET License>” označite licencu “AAAA” (200 x EEA)
- Zadatkom “Software install” instalirajte sigurnosni program na računala u grupi “grpLaptop3”:
 - u koraku “<Choose package>” odaberite najnoviju verziju programa “ESET Endpoint Security” (EES)
 - za aktiviranje, u koraku “<Choose ESET License>” označite licencu “DDDD” (25 x EES)
- Zadatkom “Software install” instalirajte sigurnosni program na računala u grupi “grpVanjski5”:
 - u koraku “<Choose package>” odaberite najnoviju verziju programa “ESET Endpoint Security” (EES)

- za aktiviranje, u koraku "<Choose ESET License>" označite licencu "GGGG" (10 x EES)

Po uspješnom završetku ćete imati 235 računala koja se javljaju serveru; bit će raspoređena u tri grupe, svaka grupa ima svoju licencu. Sva računala imaju isti policy za Agentu jer se svi javljaju istom EP serveru.

Više informacija

^(*) Instaliranje ESET Protect servera:

- na Windows Server

https://help.eset.com/protect_install/80/en-US/?install_win.html

- Virtual Appliance

https://help.eset.com/protect_deploy_va/80/en-US/?implementation_maintenance.html

^(*) Ovisno o politici nazivanja računala, moguće je da se pojave "dupli" ili da ne znate kojoj grupi pripada neko računalo. Zbog toga predlažemo da instalirate Agentu po grupama – prvo na računala koja će pripadati jednoj statičkoj grupi u EP, pa na računala druge grupe, itd.

^(*) Zbog vanjskih suradnika i laptopa koji povremeno ili nikada nisu u lokalnoj mreži morat ćete im dopustiti komunikaciju s Interneta prema EP serveru. To učinite prema uputama

<https://www.nod32.com.hr/podrska/kb6815>.

Napravite backup EP servera (https://help.eset.com/protect_install/80/en-US/db_backup.html).

Izvezite statičke grupe (https://help.eset.com/protect_admin/80/en-US/admin_sg_export.html) (Sl.5).

Izvezite sve certifikate (<https://www.youtube.com/watch?v=lZ3gLn0cOOo>). Napomena: video prikazuje postupak na starom ERA65, ali je princip isti i na novim verzijama.

✕

Deploy Agent

Agent connects computers to ESET PROTECT and allows you to manage them remotely. Select the deployment method appropriate for your network.

LOCAL DEPLOYMENT

- ☒ Create **All-in-one Installer** (Windows only)
- ☐ Create **Agent Live Installer**
- ☐ Download **Agent** from ESET website

REMOTE DEPLOYMENT

- ☐ Use **GPO** or **SCCM** for deployment
- ☐ Server Task **Agent** installation
- ☐ Use the standalone **Deployment Tool**

Create All-in-one Installer (Windows only)

Live Installer will automatically download and install a product and connect your device to ESET PROTECT.
