

Usporedba programa ESET Endpoint Security i ESET Endpoint Antivirus

Tema

Usporedba programa ESET Endpoint Security (EES) i ESET Endpoint Antivirus (EEA).

Detalji

Jedna od ključnih razlika poslovnih licenca u našoj ponudi je program za desktope koji je uključen u pojedinu licencu - neke uključuju mogućnost instaliranja programa ESET Endpoint Security (EES), a druge ESET Endpoint Antivirus (EEA).

Obje vrste licence uključuju mogućnost korištenja servera za udaljeno administriranje (ESET Protect /EPX/ ili ESET Protect Cloud /EPC/) i programa ESET Server Security (ESS) za servere.

Program Endpoint Security u odnosu na Endpoint Antivirus, ima dodatne sigurnosne module i pruža širi opseg zaštite:

- Osobni firewall u Endpoint Security ... sprječava neovlašteni pristup računalu ili internetu i omogućuje da ostanete nevidljivi drugim korisnicima javnih mreža
- Antispam ... pomaže u uklanjanju neželjene pošte iz poštanskog sandučića ili prije primitka
- Web kontrola ... jednostavnija i detaljnija kontrola / ograničenje pristupa webu po kategorijama web stranica
- Zaštita od botneta ... štiti od infiltracija bot-malwarea sprječavajući time spam i mrežne napade koje napadači pokušavaju pokrenuti s vaših računala

Što se tiče zaštite od malwarea (skupno ime za viruse, trojance, crve, ...) ... oba programa pružaju jednaku zaštitu.
